

23Q2 NET ZERO BUILDINGS TASK FORCE SUMMARY

12-MONTH CRITICAL OBSTACLE

Improved market intelligence to identify buildings with the highest potential for heat pump integration.

– CHARLIE MARINO
Partner and Co-Director,
Energy & Performance Team

AKF

12-MONTH SOLUTION

Create weighted database merging existing sources (CBL, NYCA, ConEd load map, DAC health map) to enable AI analytics.

M1: Access, validate, review data sources.

M2: Combine & analyze data sets.

M3: DB draft.

M4: DB update, release, socialization

- TABLE # 4

23Q2 TASK FORCE UPDATES

UPDATES:

The Task Force team is working on a list of criteria to determine the best building candidates for electrification/heat pumps. Once we create this list, it will be applied to the city's database of buildings to determine best candidates, and we look forward to potentially engaging with NYSERDA and other organizations on the development of a larger, publicly-available tool.

NEXT STEPS:

- Work with AKF NYSERDA hackathon team to build and refine heat pump/electrification criteria list
