

Sustainable Transportation: Looking to 2050

Jen Robertson, Transportation Policy Advisor

A Livable Climate

- **Building Electrification**
- **Transportation Mode-Shift**
- **Renewable Energy**
- **Waste Prevention & Diversion**

Our Charge

lead a
just
transition
to achieve
carbon
neutrality
by 2050

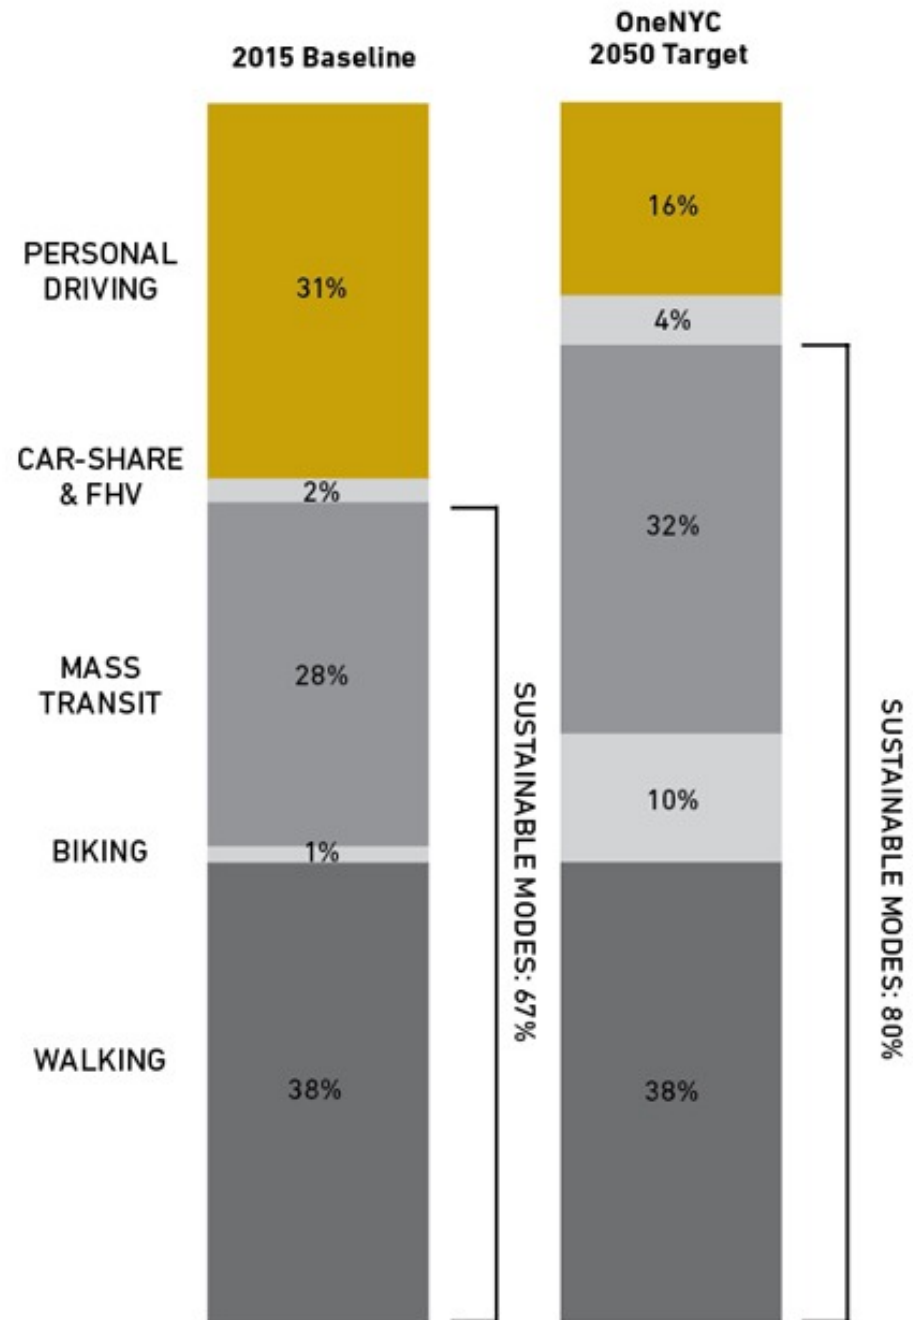

Sustainable Mobility

New York will have an **80% sustainable modes share by 2050**

- Most trips will be done by walking, biking or on transit
- There are some trips, due to accessibility or commercial logistics, that will require a vehicle
- Those remaining 20% of vehicular trips will be efficient and zero emission

Currently New York has a **64% sustainable mode share** with most trips done by walking

Transportation

- Improving infrastructure for **Buses, Trains, Bikes, and Pedestrians**
- Expanding access to charging for **Electric Vehicles**
- Encouraging the responsible growth of **Shared Mobility**
- Innovating in street design with **Pedestrian Zones**

**For Mobility & Transportation to enable
New York's decarbonization goals, we must
first create a car optional city**
